14. Please describe any specific aspects of the course and/or teaching practices that your instructor used that particularly helped you to engage with the material, learn the material, and/or develop your own critical perspectives on the material.

Created labs and quizzes that tested students exactly like the exam.

Gave examples of data and how we should interpret them.

I liked that he posted study guides for the exam. I felt like it covered all the material that would show up on the test, which made it a lot easier to study.

in person lectures as well as providing recorded lectures to review

Labs

The instructor helped me stay engaged with the material, understand key concepts more deeply, and develop my own critical perspective.

The recordings of the lectures were very helpful in reviewing the concepts of the class.

15. Please describe any specific aspects of the course and/or teaching practices that your instructor used that were less helpful for your learning. Optionally you may offer constructive suggestions that might improve their effectiveness.

class wasn't very engaging. He just read straight off the slides and sent us home 20 minutes early. He tried to ask question while doing the coding part of the class but it was kinda rare. I lowkey learned everything by myself outside of class.

Lectures could get a little monotone.

maybe increase more practice test or tell us which part is important

Not very interactive with the class and mostly just going over slides during lecture.

weekly quizzes

16. Please describe any specific aspects of the course and/or teaching practices that your instructor used that created or interfered with a welcoming learning environment that valued and supported students from all backgrounds and identities.

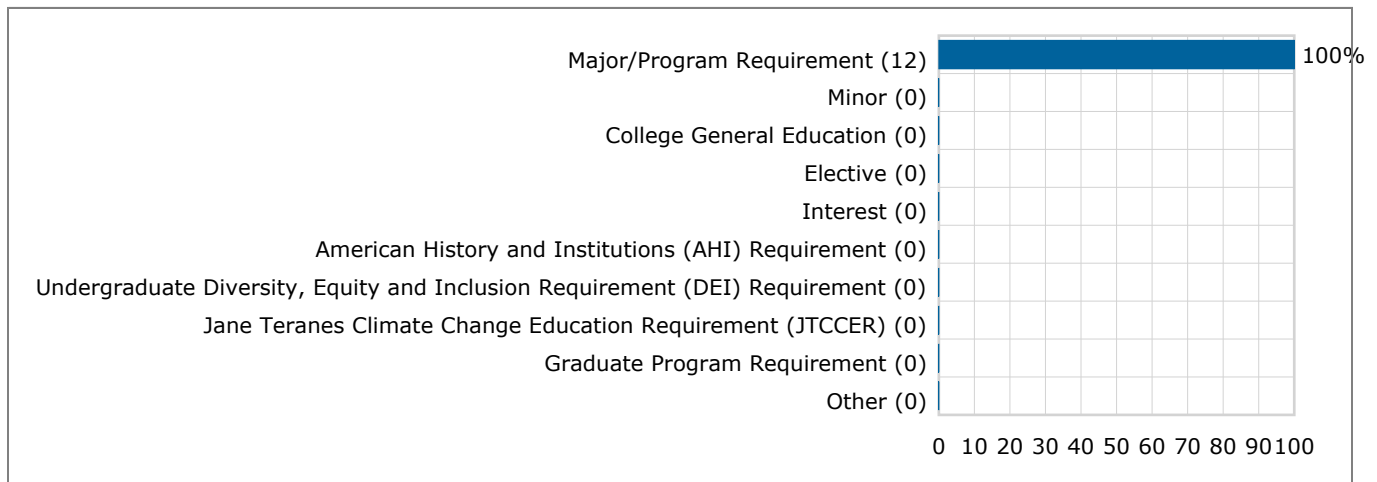

The instructor fostered a welcoming and inclusive learning environment by encouraging open discussion, respecting diverse perspectives, and making all students feel valued and supported regardless of background or identity.

Tried to interact with students which is good.

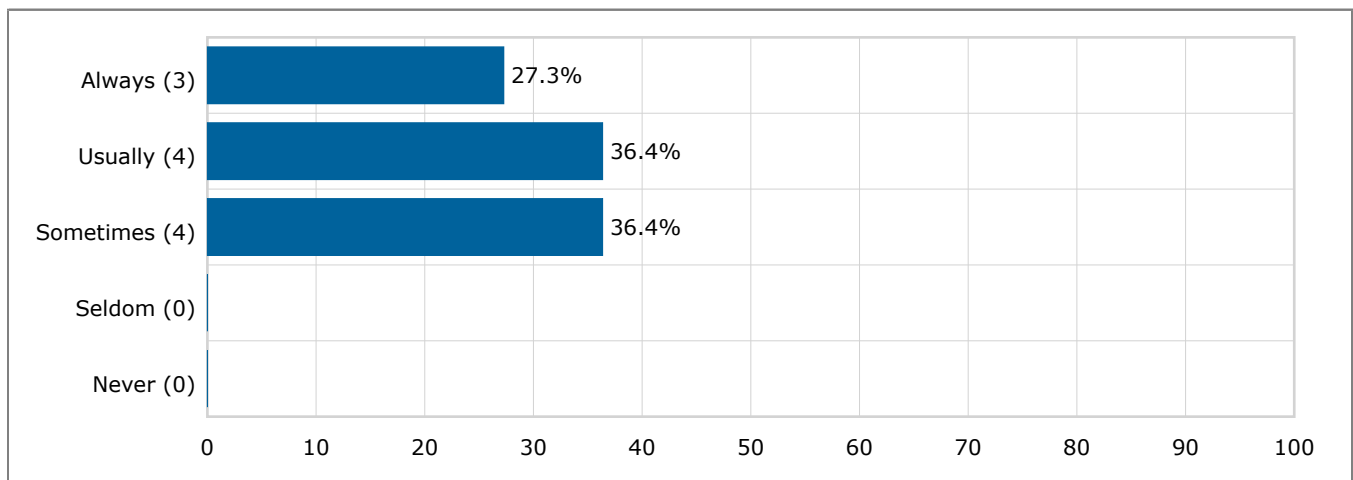

Was very understanding of people of all levels

Student Participation

17. What was/were your reason(s) for taking this course?

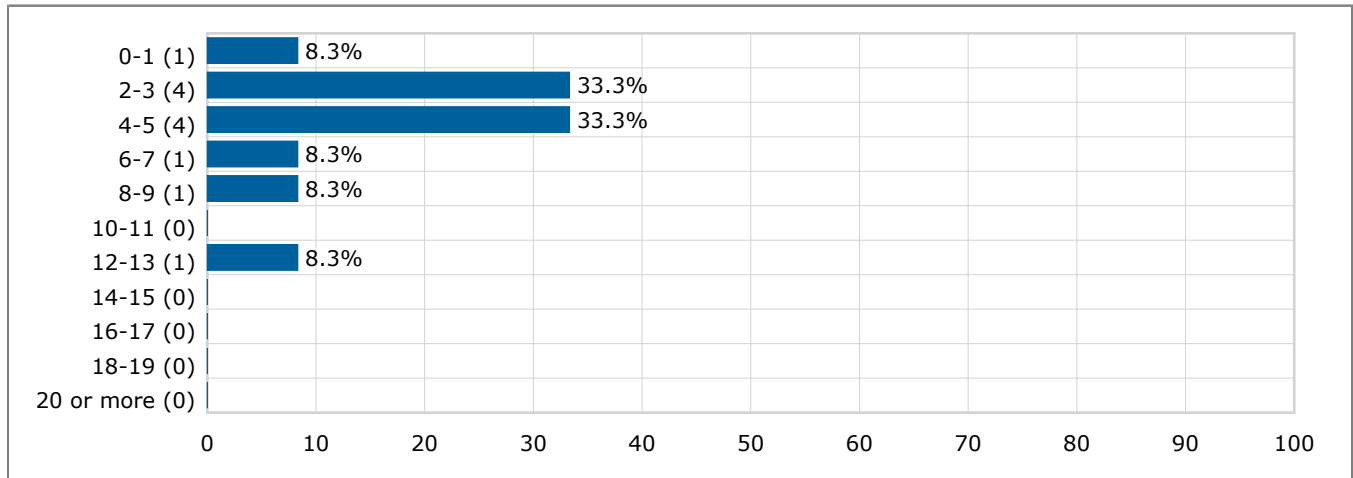

18. How often did you attend class and/or engage with course materials?

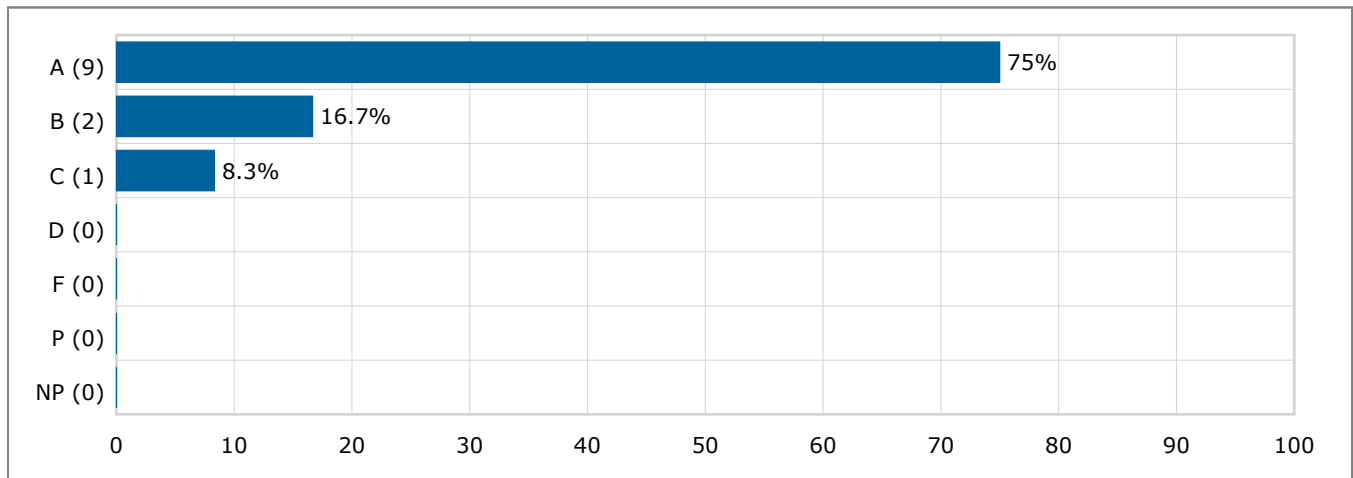

No Response: 1

19. Hours per week of work outside of class

20. Expected grade in the course

Additional Feedback

21. Is there anything else you would like to share about your experience in the course?

Enjoyed the class, but it was during a bad time slot

I would recommend a study guide on the concepts we should focus on in addition to the practice exams because of the large amount of material in this course.

12. Do you have any other comments to add to your evaluation?

Please keep your comments constructive and professional, abiding by the Principles of Community

For me, I believe more hands-on activities to better memorize code, or classes oriented on getting used to the interface would be better rather than just looking at the presentation.

I mean, to cut some slack, he did say that he wasn't a full-fledged professor, just a Ph. D student. However, I do think that Instructor Gilliat's teaching is a bit unconfident, where it feels like he's unsure about what he's teaching. I know that he knows what he's teaching, but it's the deliverance that's what brings him down. He's a very nice person and approachable, but I don't feel like the teaching style allows me to learn that well.

I think an addition of some end of the week review slides that go over different commands we've learned would be helpful.

I think Kurtis is a kind person and he seems knowledgeable enough about the information, but he told us from the start that he is not a professor and has never taught a class before. I find it difficult to take the course seriously because I feel it isn't right for a fellow student to be teaching us. He lacks presenting skills and it is difficult to hear him at times. While he does demonstrate what to do in the applications, he seems to just demo based on the slides and doesn't present anything beyond what is already there. I think he is trying his best for what it's worth, but I think it's wrong that he has been put in this situation.

I would like for the class to be more interactive and maybe go over some more specific examples of how the code can be used in other situations.

In lectures when we are following the code you write it is sometimes hard to keep up because I am typing the code you put but while I do that, you move on a little too fast where I don't see what exactly you did next. Otherwise, super nice guy.

Maybe enlarge the screen would be better

No, Professor Gillian is great.

Professor Gilliat is very knowledgeable about the subjects he is teaching, and I have enjoyed taking his course so far.

The lectures are really great this course has great active learning problems and they are also really helpful!

The pacing is a little too fast and I would like the lectures to cover materials that are important for exams since there is no past exams or practice exams and like make lectures directed towards how midterms and exam would look like.
